Mr. Abma,

Thank you for your email. I have forwarded to the appropriate people for their consideration.

Best regards,  
Michael Stoker  
EPA Regional Administrator-Region 9  
Cell Ex. 6 Personal Privacy (PP)

Good day Mr. Stoker

I was given your email address from our State Supervisor Debbie Arnold. She may have met with you on her last trip to DC, a month or two ago or talked with you on the phone. We are trying to connect with the right people, those people that truly want to see President Trump Win at what he is doing. He has from the beginning been talking Clean Coal. We realize it has been a challenge for him that he has not been able to fully get that situation corrected. The Environmentalists are a hard core challenging bunch. AOC and her Green New Deal is another stupid challenge put before the Administration to counter.

We have developed a Carbon Capture Utilization System that we want the President to see. [https://youtu.be/RQRQ7S92\\_lo](https://youtu.be/RQRQ7S92_lo) He will then be able to say "We do have a Clean Coal Solution. It turns CO2 into money and jobs. It's great for the environment and Americas Economy".

We take an earth based product and produce more earth based products. The sale of these produced products will return to the utility their investment to put in our Sidel CCU System, and these coal fired utilities will be putting into the atmosphere less CO2 than a natural gas power plant.

Speaking about natural gas. I am sure you have seen the latest EIA Report on Americas Natural Gas Supply. (see attached) This is scary. And the environmentalists want more coal power plants shut down and converted to natural gas. America has over 600 years of good quality coal available. America has to produce all it's electricity with Clean Coal and use it's natural gas for building space heating and for industry to produce all those products we consume daily.

Renewable energy is good but it has it's limitations.

The EPA must guide America to use it's energy wisely so that decades from now when a light switch is turned on the lights will turn on.

The Navajo Generating Station in Page Arizona that was supposed to produce electricity till 2044, because of the environmentalists is now scheduled to be shut down December 2019. With our Sidel CCU System the President and his Administration could save this facility. Over 800 Tribal Indians depend on this coal mine and electric train and power plant to provide to them their jobs and their income. Take that away and they will become dependent on the government to provide for their needs. Putting in our CCU System will require these people to plant out

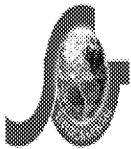

45,000 acres a year of vegetables to absorb the CO2 out of the combusted exhaust. Our plan if we can is to construct next to the power plant property a large range of greenhouses that will be heated and or cooled with the recovered heat energy from the power plants exhaust. This will create even more full time jobs for these Native Indians, growing and producing food to be sold into the market place.

What more can I arm you with as you look to make a case for us?  
I look forward to your reply.

**Have a Fantastic Day!**

**Sid Abma** CEO, Sidel Global Environmental
